Skills

Languages: Java, C/C++, SQL

Databases & Frameworks: PostgreSQL, MySQL, Redis, IBM Db2 LUW pureScale, Spring Boot, Spring MVC, Spring Security, Hibernate, Spring Data JPA, JDBC, JWT, OAuth

Key Concepts: Multithreading and Concurrency, Distributed Systems, Transactions, Partitioning, Data Structures and Algorithms, Low Level Design, High Level Design, Microservices

Technologies & Tools: AWS ECS, EC2, S3, SQS, Lambda, RDS, Rekognition, Textract, Docker, Kafka, GitHub Actions, Jenkins, Datadog, Grafana, Postman, REST, SOAP, Innovate runtime

Work Experience

Deloitte, Bengaluru Feb 2025 - Present

Software Development Engineer II (SDE II)

- Contributed to modernizing legacy COBOL applications for Java-based execution on AWS using the Innovate runtime, adapting application interfaces for the migrated environment.
- Repointed database interfaces from mainframe Db2 to IBM Db2 LUW pureScale and migrated messaging interfaces from MQ to Amazon SQS.
- Built a Spring Boot integration microservice from scratch, owning requirements gathering, implementation, and deployment on AWS ECS.
- Repointed NDS and CICS interfaces to the microservice for SOAP, NDS, and REST request handling; replaced legacy socket-based connections with REST endpoints.
- Created GitHub Actions CI/CD pipelines to automate build and deployment of the microservice to AWS ECS.

PureSoftware, Noida Jul 2021 - Feb 2025

Software Engineer

- Designed and developed RESTful services for a digital payment application using caching, hashing, biometric authentication, checksums, rate limiting, and encryption to improve onboarding and security.
- Implemented secure KYC services using AWS Rekognition Face Liveness, OCR, and Textract to detect spoof attacks, reducing fraudulent account creation by more than 90%.
- Developed backend APIs for a financial back-office application to collect financial data and provide insights into revenue, cost, and profitability.
- Designed and developed a Letter Automation Process Engine for medical billing, eliminating 70% of manual data entry.
- Used Datadog and Grafana to monitor servers, databases, containers, and third-party services, diagnose performance issues, and reduce downtime.
- Applied SOLID principles and Singleton, Factory, and Builder patterns; resolved more than 90% of bugs reported during SIT and UAT cycles.

Education

NIT-Bhopal Aug 2017 - Jun 2021

B.Tech in Electronics and Communication Engineering **|** ***CGPA: 7.62/10***

Relevant Coursework: Object Oriented Programming, Databases, Data Structures and Algorithms, Computer Networks, Neural Networks, Image Processing, MATLAB

Project Work

- **Blogging Application (2021):** Built a web application with search, sorting, and pagination; implemented registration and login using JWT and Spring Security. Link
- **Smart Student Management System (2020):** Built a web application with role-based access and functionality to add, update, and remove students and lessons.

Awards and Certificates

- **LeetCode:** Solved 250+ problems to strengthen problem-solving skills. Link
- Received multiple Bravo awards for exceptional work at PureSoftware.
- Completed Udemy specializations in Spring Boot, microservices, and networking fundamentals.
